Clo/Virtual Fit Evals in Tradestone

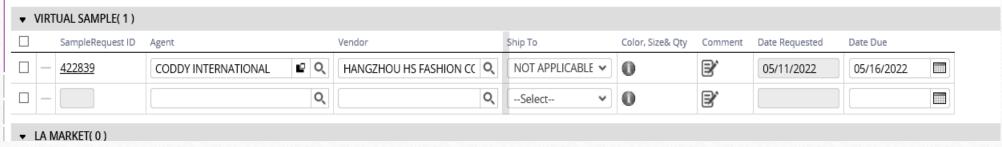

5/26/22

SAMPLE REQUESTS

1. At time of setup, Tech Designer OR PD can create a virtual sample request on samples tab in TS. Consult with PD Manager on correct process for this step.

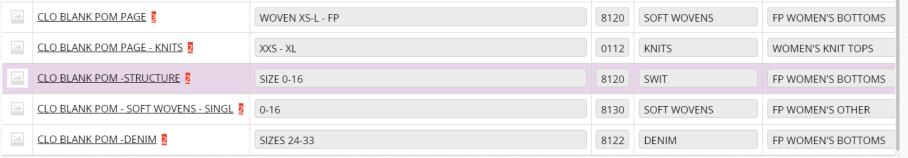

2. Agent name, vendor (select TBD option if unknown) and due date must be filled out. Select a 3 day due date(excluding weekends).

POM PAGE

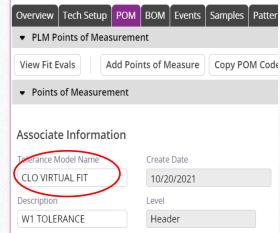

3. Create a POM page in TS – the POM page can be real or blank. Below is current list of "blank" POM's that can be smart copied. Always update sizes and tolerance to match correct category/brand.

4. Rename your POM page "Clo Virtual fit" by typing name into "tolerance model name" on POM page.

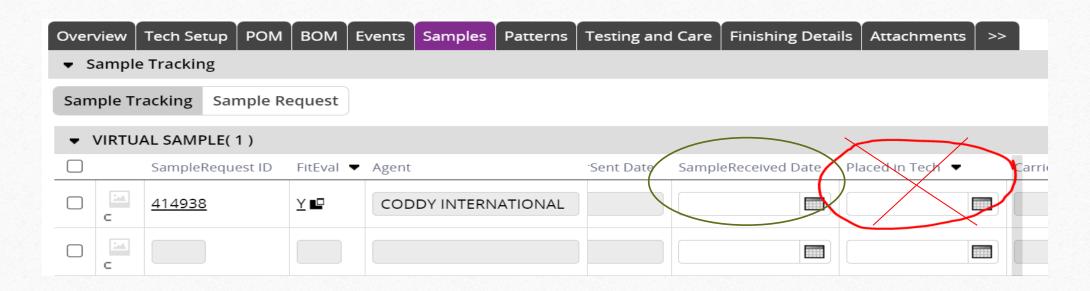

NOTE: It is recommended to have separate POM pages and FIT EVALS specifically for Clo fits. It is the techs

decision whether to have one POM for virtual and physical samples.

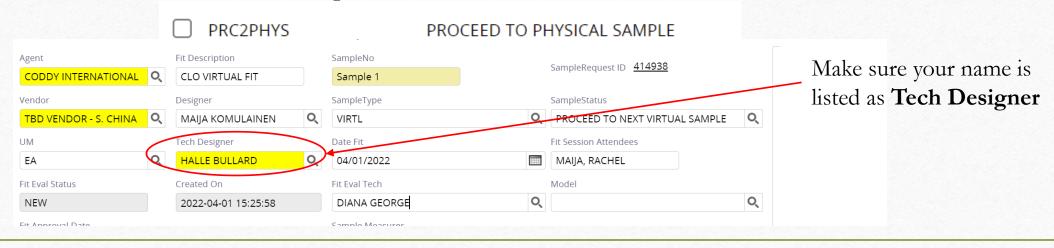

RECEIVING VIRTUAL SAMPLES

- 5. When you receive e-mail with Virtual fit/Clo-set link check in the sample in TS by going to sample page and adding "Sample received" date. If Virtual sample was never requested, see step #3. Placed in Tech does not need to be completed for Virtual fit samples
- 6. Create Virtual sample fit eval. Physical fit comments will not be completed on the same fit eval as Virtual fits.

VIRTUAL FIT COMMENTS

- 7. Add comments to fit eval. Sample type is always "VIRTL". There are 2 ways to do comments:
 - if you have updated pattern or made annotations in Clo-set, you can add the link in comments section
- If you used illustrator to show comments, attached illustrator image the same way we do for physical comments.
- 8. Update specs only if you have specs on POM page. If you are not using specs on POM page, make sure all your comments/spec callouts are noted in your link or illustrator image
- 9. Select sample status only status with the name "virtual" should be selected when you are requesting to see corrections before going to physical sample. If you are approving to physical sample, select "proceed to physical sample." No need to Initiate Next Sample.

VIRTUAL FIT COMMENTS

- 10. REJECTING: Virtual fits can and should be REJECTED if setup was not followed. The status for Virtual fit rejections is the same as Physical fit REJECT. However, always make sure your sample type is VIRTL. Also, always note in comments the reason for the rejection.
- 11. Update Overview page with Virtual sample status and dates, e-mail vendor, with PD on CC that comments are ready in TS.
- 12. REQUESTING PHYSICAL SAMPLE: PD will create the Physical Fit sample (PROTO) sample request. This can vary by team so check with your PD Manager to reconfirm this process.

Notes and Comments

5/6/22 - - Clo virtual fit approved. Proceed to physical sample.

4-15-22 Proceed to 2nd CLO virtual fit. See virtual fit eval comments page for reference,

4/4/22 - proceed to Clo virtual fit sample. See original sample, tech setup and block pattern. DG
