

Did you know...

These navigational tips in Qlik?

The Hub is the home of all Qlik apps, which are organized in Streams...

Streams are used to organize apps by department, system, or purpose

For example, **Production & Sourcing** will have all apps used by Production users

Apps may be labeled **WIP** or **UAT**

WIP – apps in development, data is not updated unless noted

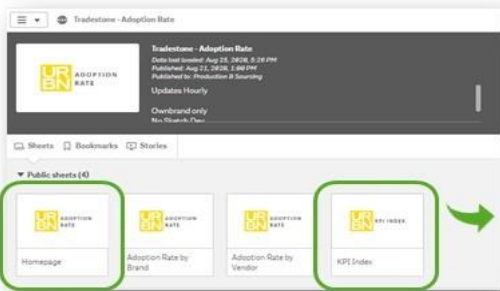

UAT – apps in user testing, data is updated regularly

Clicking on the info button displays app info including: update cadence, backend criteria, and last refresh time

To open an app select the icon, or hit the Open button on the app info...

Users will either land on a homepage or a landing page, pictured on the left

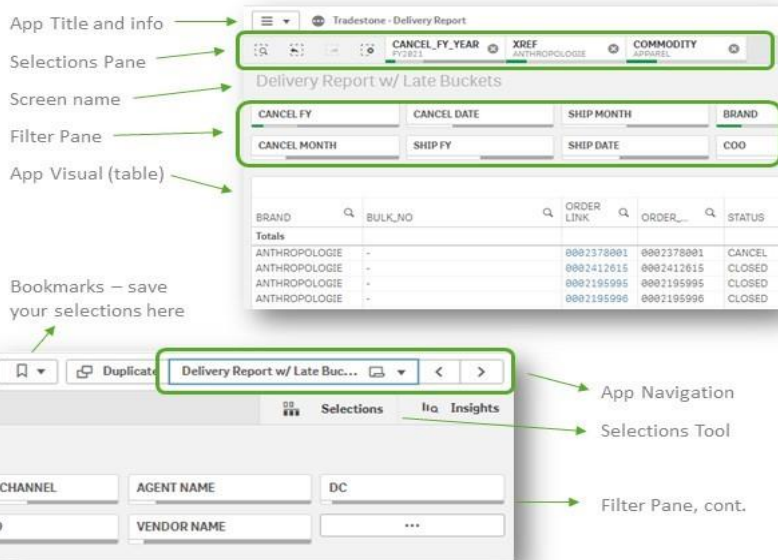

The landing page shows the screens available in each application

Screens are different compilations of visuals and tables

Apps with a Homepage include the following; last update time, app tutorial, and modification log

App screen layouts can differ, but organization is consistent...

Bookmarks – save your selections here

App Navigation

Selections Tool

Filter Pane, cont.

Bookmarks can be used to save your selections for future purposes (these are user specific)

Some apps include KPI indexes, which include calculation breakdowns and backend criteria...
